Today's Presenters

Dr. Kathy Hirsh-Pasek

Professor of Psychology at Temple University and a senior fellow at the Brookings Institute

Stephanie Firestone

Senior Strategic Policy Advisor
with AARP International

Transforming cities into intergenerational spaces that build connections and encourage learning

Kathy Hirsh-Pasek, PhD
Temple University
Brookings Institution
February 29, 2024

Using the science of learning as a base, our work is based on a 3-part equation for re-imagining education through play

Cultural, Community values + The science of *how* children learn + The science of *what* children should learn

With a learning goal =
Playful Learning

The 6Cs

		Collaboration	Communication	Content	Critical Thinking	Creative Innovation	Confidence
+	Level 4	Building it together	Tell a joint story	Expertise	Evidence	Vision	Dare to fail
	Level 3	Back and forth	Dialogue	Making connections	Opinions	Voice	Calculated risks
	Level 2	Side by side	Show and tell	Wide breadth / Shallow understanding	Truths differ	Means-end	Where do I stand?
	Level 1	On my own	Raw emotion	Early learning / Situation specific	Seeing is believing	Experimentation	Barrel on

And all are backed by a strong research base.....

- Note – these are *not* play spaces per se, but rather spaces that people naturally go – bus stops, libraries, supermarkets -- that we enrich through intentional, cognitive inspired architecture.

Here is how it looks in practice.....

Our work in Communities – Example 1: Urban Thinkscape

- Transforming a bus stop into a playful learning space
- Over 100 community members participated in building the site
- Community members trained as “data ambassadors” to collect observational data on use and learning from the site
- Results (N=280) 28% increase in adult/child language and in targeted spatial or number language use 3/8/2024

Hassinger-Das et al.

Hassinger-Das et al., in press

How the bus stop changes in Santa Ana

Example 2: Playbrary

- Can we even change a library to enhance playful learning and conversation? You bet.

RESULTS:

- Number of children using number, spatial, color, or letter language increased by 44% from pre to posttest.
- Adults and children' technology use decreased by 38% from pre to posttest.

Creating Enabling & Equitable Housing and Multigenerational Communities

A Statement of Built Environment Principles

Societies across the globe are in the midst of long-term growth in the older adult population; by 2050, one in four people will be age 60 or older. Yet our homes and communities do not even meet current lifespan needs, as they were mostly designed for young, typically-abled people. Senior living options can address some of these issues but are often financially out of reach, and most older adults do not want to move to age-segregated communities. Indeed, mixed generations are increasingly living together, as illustrated by the growing trend in multigenerational households.

Many of our communities were built around the automobile, which limits a sense of community, negatively impacts safety and individual health, and increases healthcare demands and costs. Over the past few decades, the public has increasingly shown that the built environment is a significant contributor to chronic disease, and other public health concerns—particularly in minority communities. The COVID-19 pandemic has illuminated the need for more equitable, inclusive, and resilient communities. In the UK, disparities in health outcomes, overburdened formal care systems, failing long-term care models, and housing models that do not provide services and supports. This is exacerbated by unequal access to digital technologies that can enable telehealth, remote learning, and interaction, and by a lack of standardization that inhibits innovation.

We aim to flip this equation and spark a movement where every resident, at every scale, is a tool for disease prevention and the promotion of health. Urban designer Jan Gehl says: "First life, then space, then architecture." We have the responsibility to create spaces that support everyone at every stage of their lives. As we begin to build and renovate our homes and communities in the COVID-19 world, we must radically accelerate the application of a framework that addresses disparities. This means housing that is safe and affordable; facilitate multigenerational interaction; address physical, social, behavioral, and health needs across the lifespan; and provide appropriate transportation options and services—enabling every resident to thrive.

In December 2019, AARP, the Agile Ageing Alliance, and the German Marshall Fund of the US convened a forum of thought leaders from development, design, and planning to explore these issues and inform a set of guiding principles for the built environment sectors. This resulting statement of principles is a resource for professionals, companies and organizations to use as a unifying framework for the creation of new—and the renovation of existing—housing and communities. We call on planners, policymakers, designers and architects, developers, financiers, academics, real estate professionals, and other colleagues to help us catalyze a societal quantum leap forward, by accelerating a shift to create age-friendly and multigenerational housing and communities that enable healthy aging for ALL.

CHALLENGE

The Status Quo is "Dis-Abiling"

Our housing and infrastructure negatively impact people's level of functioning when not designed with respect to the true range of physical and cognitive abilities. If the environment is overly demanding, people struggle. If under-demanding, people do not have the opportunity to function within their abilities, which then atrophy.

Limited Options and Demand

Housing design and policy solutions are rarely informed by real needs. Housing has been built the same way for so long that people can only envision a narrow range of products. Consumers rarely know what to ask for and thus demand too little.

PRINCIPLE

Enable by Design

Regulations and practice should fully consider citizens' needs, abilities and behaviors. We shall create housing and communities designed to fit people's varying functional levels, providing an optimal balance between effort and support so people can function well within their abilities at every age.

Drive Informed Demand

Individuals and families have a right to expect living environments that are safe and enabling across the lifespan. We must demonstrate innovations that advance this goal and become the norm and not the exception.

Alleviate Disparities

We shall prioritize the creation and maintenance of enabling built environments in disproportionately impacted communities, as a vehicle for properly addressing the needs of disadvantaged residents and alleviating disparities.

Create Appropriate Finance Products

We shall pursue the expansion of existing, and the development of new, financial models and products to facilitate investment in housing stock and communities that enable independence over the lifespan and view lifelong, multigenerational living environments as an asset.

Prioritize Connectivity

We must prioritize the provision of broadband access and appropriate technologies that enable telehealth and remote learning, work, and engagement, as a means to facilitate greater independence and participation by residents of all ages and abilities in all aspects of society.

Facilitate Intergenerational Engagement

We shall create living environments that facilitate engagement across all generations, for their mutual benefit and the continued contribution to society by people of all ages. This familiarity will also serve to combat ageist stereotypes.

Lead Cross-Sector Collaboration

We must use municipal planning and zoning policies and tools to create public strategies that promote health for all, sustainability, and social cohesion, and advance developments that demonstrate an active contribution to these agendas.

Infuse Age-Friendliness in Other Priorities

We shall tap existing efforts to advance UN Sustainable Development Goals, as opportunities in a post-COVID-19 world to regenerate and retrofit our built environment assets using a lifelong lens.

Facilitate Intergenerational Engagement
 We shall create living environments that facilitate engagement across all generations, for their mutual benefit and the continued contribution to society by people of all ages. This familiarity will also serve to combat ageist stereotypes.

Play is a basic human need, as essential to our well-being as sleep.”

- Dr. Stuart Brown, Founder, National Institute for Play

For people of ALL ages, play and playfulness can:

- **Stimulate the mind/ improve brain functioning**
- **Nurture creativity**
- **Relieve stress**
- **Enhance relationships**
- **Improve mood**

EQUITY by DESIGN— PRINCIPLES in ACTION

#BuildEquity

EQUITY by DESIGN—PRINCIPLES in ACTION

#BuildEquity

As we emerge from a tough pandemic, let's continue action among professionals in the field that shape the physical housing and communities where we live. This series of case studies shows communities that are advancing a set of **guiding principles** for built environment professionals— from creative ways to reduce inequities and engage the public to participatory planning, to unique housing and community models that enable every resident to thrive.

Public Participation in Planning Through PLAY

Espacio Lúdico

By Stephanie Firestone and Esther Greenhouse

Espacio Lúdico (ELA), an NGO in Santiago, Chile, activates citizens to help design and improve public spaces and the broader public realm in their communities. Their innovation lies in the unique way in which they engage the public to participate in city planning: they do it through play!

Games and other fun activities are Espacio Lúdico's tools for understanding the problems residents perceive in their communities and co-designing solutions that address them. ELA activates different groups within a community and lifts up the voices of more vulnerable ones. They actively level the playing field by providing equal weight to all input in decision-making processes—because “all are the same in the game.” And when COVID-19 prevented their in-person activities, they innovated even further—literally out of a box.

aarp.org/equitybydesign

As we emerge from a tough pandemic, let's continue action among professionals in the field that shape the physical housing and communities where we live. Intergenerational Play Spaces

By Stephanie Firestone and Julia Glassman

In 1984 playwright George Bernard Shaw famously said, “We don't stop playing because we grow older; we grow older because we stop playing.” Play is not only beneficial but essential for people of all ages. Today, there is increasing interest in the benefits of not only play itself, but specifically people from younger and older generations playing together. The built environment in our communities plays a critical role in facilitating this intergenerational engagement and play. Approaches such as Intergenerational Contact Zones (ICZ) introduce strategies for promoting social inclusion and belonging, employing novel ways of planning and designing public spaces to create intergenerationally enriched environments.
